Single Line Diagram of 11kV Substation
Substation provides the energy supply for the local area in which the line is located. The main function of the substation is to collect the energy transmitted at high voltage from the generating station and then reduce the voltage to an appropriate value for local distribution and gives facilities for switching.

First, you have to separate the power
and control wiring so there's less of a
chance that electrical noise could affect

control signals. Second, you need to separate field wiring from internal wiring by placing terminal strips so that there are wire ducts for each - and that means selecting the proper size wire ducts so you conserve as much space in the enclosure as possible.
