I have matched the crank and camshaft marks per spec. I set the timing per spec and method but it bogs til about 2K rpm then lacks power until ~4K rpm. I set the timing to 20Deg BTDC and it runs fine in all rpm ranges. Will this setting have neg effects on the engine life? Have replaced cap, rotor, plugs, air filter, spk wires good to spec.

So, if you see the timing pointer pointing to the notch by the blue arrow, then you can skip the next adjustment step. Here are a couple more pics taken from the Haynes manual. 8) To adjust the timing, you need to pivot the distributor. Do this by loosening the two 12mm bolts, that hold the distributor to the engine head, a turn or two.
