In Tutorial 12: Graphing Equations, we went over graphing in general, learning the basics of how to graph ANY equation by plotting points. In this tutorial we will be looking specifically at graphing lines. The concept of using intercepts to help graph will be introduced on this page, as well as vertical and horizontal lines.

This method of drawing the graph of a linear equation is called the intercept method of graphing. Note that when we use this method of graphing a linear equation, there is no advantage in first expressing  $y$  explicitly in terms of  $x$ . Example 1 . Graph  $2x - y = 6$  by the intercept method. Solution
