The social history of viruses describes the influence of viruses and viral infections on human history. Epidemics caused by viruses began when human behaviour changed during the Neolithic period, around 12,000 years ago, when humans developed more densely populated agricultural communities. This allowed viruses to spread rapidly and subsequently to become endemic.

The majority of Wollstonecraft's early works focus on education. She advocates educating children into the emerging middle-class ethos: self-discipline, honesty, frugality, and social contentment. She also advocates the education of women, a controversial topic at the time and one which she would return to throughout her career.
