Anatomy and Applied Physiology - Journal - SciDoc Publishers

Physiology and anatomy of a human body are extremely closely associated medical sciences that are usually taught together. Anatomy deals with the study of internal structures or organs of an organism. In plants, it deals with the arrangement of different types of tissues in root, stem and leaf, etc. On the other hand, Physiology deals with study of functions of different parts of living organisms.

Physiology | Human body | How are Anatomy and Physiology ...

Applied physiology goes beyond the study of biological systems and steps into practical applications. For example, anatomy involves the study of muscle, organs and connective tissue in terms of form and structure, but this field is more concerned with the purpose and function of these systems and how they relate to the rest of the organism.

What Is Applied Physiology? (with pictures)

This would be equal to 5.25 liters of fluid per minute and approximately 14,000 liters per day. Over one year, that would equal 10,000,000 liters or 2.6 million gallons of blood sent through roughly 60,000 miles of vessels. In order to understand how that happens, it is necessary to understand the anatomy and physiology of the heart.
