The bushy-tailed woodrat (*Neotoma cinerea*), often called a packrat, is among the largest and most common woodrats, weighing up to 600 grams (about 1.3 pounds) and having a body length of up to 25 cm (nearly 10 inches). Its slightly shorter tail is longhaired and bushy, which is unique within the genus. The Arizona woodrat (*N. devia*) is one of the smallest, weighing less than 132 grams and ...

### **Rat - Wikipedia**

Mice like to gnaw on household objects. Gnawed wood, wires, fabrics, and even soaps are a sign a mouse is nearby. Rats live in different areas depending on their species. Some rat species, like roof rats, prefer to live up high in trees, attics, on the roof of a home or building, or in other tall dwellings.

The best-known rat species are the black rat (*Rattus rattus*) and the brown rat (*Rattus norvegicus*). This group, generally known as the Old World rats or true rats, originated in Asia. Rats are bigger than most Old World mice, which are their relatives, but seldom weigh over 500 grams (17 1/2 oz) in the wild.. The term rat is also used in the names of other small mammals that are not true rats.

No pains were spared to make this a perfect and readable description of the anatomy of the laboratory rat; and the printing and binding match the standard of the text. According to the Preface, readers are assumed to have some knowledge of mammalian anatomy

and, naturally, this would normally be so, but such knowledge is not necessary for the reader of this book.
