Measure the mass and volume of a variety of objects, then place them into a beaker of liquid to see if they float or sink. Learn to predict whether objects will float or sink in water based on their mass and volume. Compare how objects float or sink in a variety of liquids, including gasoline, oil, seawater, and corn syrup. Density.

~~Teacher Guide: Density Laboratory~~

The answer, of course, is that the density is the same. In the Gizmo, students can investigate four known materials and two unknowns. Students find the mass, volume, and density of the whole material, then place it in water to see if it floats. Next, students cut the material into smaller chunks. Students can then investigate each chunk to see that it has the same density (and same buoyancy) as the whole.

Gizmo Warm-up The Density Laboratory Gizmo™ allows you to measure a variety of objects, then drop them in water (or other liquid) to see if they sink or float. 1. An object's mass is the amount of matter it contains. The mass of an object can be measured with a calibrated scale like the one shown in the Gizmo. Drag the first object onto the Scale.
