Quia - Chapter 13: Genetic Engineering
Chapter 13 Genetic Engineering For
thousands of years, people have chosen
to breed only the animals and plants
with the desired traits. This technique is
called selective breeding. Selective
breeding takes advantage of naturally
occurring genetic variation in a group of
living things. One tool used by selective
breeders is hybridization.

DNA technology to modify an organism's DNA to achieve desirable traits. The addition of foreign DNA in the form of recombinant DNA vectors generated by molecular cloning is the most common method of genetic engineering.

Glencoe Science - SGA Biology - Home Chapter 13 Genetic Engineering. In this chapter, you will read about techniques such as controlled breeding, manipulating DNA, and introducing DNA into cells that can be used to alter the genes of organisms. You will also find out how these techniques can be used in industry, agriculture, and medicine.
