Chapter 4: Patterns of Heredity Section
4.1: Living things inherit traits in
patterns. • Inherited traits are traits
such as hair color, eye color, and blood
type, which are all traits that you are
born with, and come from your parents.
• Acquired traits are traits that you
develop during your life. These are
learned traits such as learning to read,

Alleles, which come in pairs, are alternate forms of the same gene. A gene occupies a specific location on both chromosomes in a pair. $d Dd d Dd Dd DD Dd$

Chapter 4: Patterns of Heredity - Desert Thunder

A gamete that forms in the reproductive organs of a female. A unit of heredity that occupies a specific location on a chromosome and codes for a particular product. The genes an organism has, or its genetic constitution. The allele that is expressed in the phenotype when two copies of it are present in the homologs.
