The ideal gas law: Unlike the other gas laws we talked about, the ideal gas law doesn't describe what happens to a gas when you manipulate it (i.e. when you change the pressure, volume, temperature). Instead, the ideal gas law describes how a gas will behave under some unchanging set of conditions referred to as an equation of state.

What is stoichiometry? The short answer: Stoichiometry is how you figure out how much stuff will be made in a chemical reaction, or how much stuff you'll need to use when performing a chemical reaction. The calculations that make this possible make heavy use of chemical equations. In the case of gas stoichiometry, gas laws are required in at least one of these calculations.

Ideal Gas Law Worksheet $PV = nRT$ Use the ideal gas law, " $PV=nRT$ ", and the universal gas constant $R = 0.0821 \text{ L}\cdot\text{atm} / \text{K}\cdot\text{mol}$ to solve the following problems: $K\cdot\text{mol}$ If pressure is needed in kPa then convert by multiplying by $101.3\text{kPa} / 1\text{atm}$ to get $R = 8.31 \text{ kPa}\cdot\text{L} / (\text{K}\cdot\text{mole})$

Fun with Stoichiometry! I know what you're thinking: You hate stoichiometry. You can't pronounce it, you can't spell it, and it involves all kinds of calculations that drive you crazy. Your friends all hate it, too, and your teacher keeps using the word "stoichiometry" like it's some kind of magic word. OK... take a deep breath.
