But following a fierce internal debate among the lobby group's members, the VDA rejected calls for a sole focus on electric mobility, and insisted that efficient combustion engines and synthetic fuels are also key to achieving climate targets. Ricardo's Head of Engine and Emissions Control Products, Phil Hopwood explains why, when it comes to sustainability, the internal combustion engine still has an important role to play. Ricardo is confident that Internal Combustion Engines (ICE) will continue as a central element within propulsion systems for future road transport.
