A complex number is a number of the form $a + bi$, where a and b are real numbers, and i is an indeterminate satisfying $i^2 = -1$. For example, $2 + 3i$ is a complex number. This way, a complex number is defined as a polynomial with real coefficients in the single indeterminate i , for which the relation $i^2 + 1 = 0$ is imposed. Based on this definition, complex numbers can be added and multiplied ...

This book shows you how to develop web database applications that are built around the three-tier architecture model shown in Figure 1-3. At the base of an application is the database tier, consisting of the database management system that manages the data users create, delete, modify, and query. Built on top of the database tier is the middle tier, which contains most of the application logic ...
