Composite Drawing Composite drawing is the most widely known application of forensic art. Composite drawing uses descriptions given by witnesses to create a drawing that is a useful tool for identifying or eliminating a suspect. A composite drawing is not intended to be a portrait of an individual, but more of a two-dimensional likeness that is a visual record of the witness' recollections.

This Standard establishes engineering practices for the definition of Composite Parts and together with related documentation practices in the Y14 Series will enable full composite part definition. When this Standard is specified as a requirement, its defined requirements are assumed to be consistent with the needs of the user.

Composite curves are used to simultaneously visualize hot streams, cold streams and the heat transfer potential between them on the same graph. It is a graphical technique for determining the heat cascade. In each temperature interval (i in the hot stream scale and j in the cold stream scale) (we use the original temperature scale), the total heat power is calculated separately for the hot and ...
