In computer engineering, microarchitecture, also called computer organization and sometimes abbreviated as μ arch or uarch, is the way a given instruction set architecture is implemented in a particular processor. A given ISA may be implemented with different microarchitectures; implementations may

What is Computer Architecture and Organization? In general terms, the architecture of a computer system can be considered as a catalogue of tools or attributes that are visible to the user such as instruction sets, number of bits used for data, addressing techniques, etc. Whereas, Organization of a computer system defines the way system

tells us how exactly all the units in the system are arranged and interconnected. A programmer can view architecture in terms of instructions, addressing modes and registers. Whereas Organization expresses the realization of architecture. While designing a computer system architecture is considered first. An organization is done on the basis of
