Essentially, a computer codes (i.e., changes) information, stores information, uses information, and produces an output (retrieves info). The idea of information processing was adopted by cognitive psychologists as a model of how human thought works. The information processing approach is based on a number of assumptions, including:

This is a milestone in the development of statistics. For the first time the effects of computers are widely recognized, nay, even adopted as is, & widely accepted to be the defacto medium when dealing with large volume of statistical data. I recommend this book for any serious researcher, educator or student in the field of Statistics.

## **Statistics - Wikipedia**

James Stevens' best-selling text, Intermediate Statistics, is written for those who use, rather than develop, statistical techniques. Dr. Stevens focuses on a conceptual understanding of the material rather than on proving the results. SAS and SPSS are an integral part of each chapter. Definitional formulas are used on small data sets to provide conceptual insight into what is being measured ...
