### **Distributed Services with OpenAFS for Enterprise and ...**

AFS is a distributed file system that enables users to share and access all of the files stored in a network of computers as easily as they access the files stored on their local machines. The file system is called distributed for this exact reason: files can reside on many different machines (be distributed across them), but are available to users on every machine.

Concurrent with the release of MacOS 10.6, OpenAFS has released OpenAFS 1.5.62 with 32 and 64 bit kernel and userspace support for Snow Leopard. Additionally, a backport of the necessary support is available and is being distributed with OpenAFS 1.4.11 effective immediately. Go to the support announcement

## Distributed services with OpenAFS : for enterprise and ...

AFS hides its distributed nature, so working with AFS files looks and feels like working with files stored on your local machine, except that you can access many more files. And because AFS relies on the power of users' client machines for computation, increasing the number of AFS users does not slow AFS performance appreciably, making it a very efficient computing environment.
