The earth revolves around the sun in an orbit which is a special geometric figure called an ellipse. An ellipse has two "center points". Each one is called a focus. The Sun is not in the exact middle of the earth's orbit. Shadow Lab The attached Shadow Lab works well for a 40 minute class period.

## ~~Earth Science Reference: Lab #8: Sun's Path across the ...~~

These changes are caused by three key principles:

- The earth rotates on its axis - causing day and night.
- The earth revolves around the sun in approximately 365 days - creating our year.
- The earth's axis is tilted at  $23.5^{\circ}$  with respect to the plane of its revolution around the sun.

Brighton's Webpage~~

With this interactive lab, you can examine the main factors that affect temperature, length of day and seasonal altitude of the sun. Hopefully you will discover how the position of the Earth in it's orbit coupled with the tilt of the Earth's axis of rotation is responsible for seasons and the position of the path of our Sun in the sky over ...

## ~~The Sun's Path / Seasons — Regents Earth Science~~

Earth Science Lab: Sun's Path and Seasons Introduction: Part A The sun's path is an apparent path across the sky. Each day, the sun appears to move in an arc across the sky at a rate of  $15^\circ/\text{hour}$ , the rate that the Earth rotates on its axis. The sun is at its highest point at Solar Noon.

~~Earth Science — Mrs. Brighton's Webpage~~  
astronomy: earth's motions Use the links below to explore available resources covering major concepts associated with the study of the Earth's motions.

Resources in this section pertain to the rotation and revolution of the Earth, its tilted orbit, the seasons, the apparent path of the Sun, Moon, and stars, and the changing appearance of shadows.
