### Engine Lubrication, Fuel, Exhaust and Electrical Systems ...

In any internal combustion engine, fuel and oxygen are combined in a combustion process to produce the power to turn the crankshaft of the engine. The job of the electrical system is to provide the spark which initiates combustion. Electrical power is generated by the magneto at the rear of the engine. The magneto relies on the physics principle of electrical inductance to produce electricity; when a wire is moved through a magnetic field an electrical current is induced in the wire. The ...
