AP Biology Lab 2 - Enzyme Catalysis. Paul Andersen starts with a brief description of enzymes and substrates. He then explains how you can measure the rate of an enzyme mediated reaction. Catalase from yeast is used to break hydrogen peroxide down into water and oxygen. He also explains how temperature and pH could affect the rate of a reaction.

Enzyme Catalysis. by Theresa Knapp Holtzclaw. Introduction. Enzymes catalyze reactions by lowering the activation energy necessary for a reaction to occur. In this laboratory, you will study some of the basic principles of molecular movement in solution and perform a series of activities to investigate these processes.

Enzymes are a special class of proteins. In the absence of the enzyme, the chemical reactions of digestion would occur at such a slow rate, the body would essentially starve to death. The digestive system would take about 50 years to process just one meal, if it did not have the needed enzymes to speed up the process.
