Among these are certain questions in geometry investigated by Leonhard Euler.His 1736 paper on the Seven Bridges of Königsberg is regarded as one of the first practical applications of topology.

The branch of mathematics that studies topological spaces in their own right is called point-set topology or general topology. Second countable and Hausdorff are point-set conditions; second countable excludes spaces which are in some sense 'too large' such as the long line, while Hausdorff excludes spaces such as "the line with two origins" (these generalizations of manifolds are discussed in ...
