In mathematics, the Pythagorean theorem, also known as Pythagoras' theorem, is a fundamental relation in Euclidean geometry among the three sides of a right triangle. It states that the area of the square whose side is the hypotenuse (the side opposite the right angle) is equal to the sum of the areas of the squares on the other two sides.

The Pythagorean Theorem says that if and only if we have a right-angled triangle then the square of the hypotenuse is equal to the sum of the squares sides. Pythagoras explains the Pythagorean Theorem by demonstrating a right triangle. He labels the hypotenuse as C and the sides as A and B. Side A is the shorts length of
