chapter.

*CH.2 SECTION 1 THE NATURE OF SOUND Flashcards | Quizlet*  
Sound is a longitudinal, mechanical wave. Sound can travel through any medium, but it cannot travel through a vacuum. There is no sound in outer space. Sound is a variation in pressure. A region of increased pressure on a sound wave is called a compression (or condensation).

### *II. Nature of Sound - mrsj.exofire.net*

the school dance if air did travel with sound? Wind gusts from the speakers would knock people over. Creating Sounds Vs. Detecting Sound(p. 535) 11. What happens to the surrounding air when a tree falls and hits the ground? Vibrations in the tree and ground create compressions and rarefactions in the air. Sound Waves Require a Medium(p. 536) 12.

### *Nature Of Sound Ch 18*

The lower frequency limit for human hearing is around 18 to 20 Hz. Frequencies below the range of human hearing are infrasonic. The frequency of a sound wave does not change as the sound wave propagates. Wavelength is inversely proportional to frequency ( $\lambda \propto 1/f$ ). Large objects generally produce long wavelength, low frequency sounds.

## *CHAPTER 21 DIRECTED READING WORKSHEET The Nature of Sound*

1 The Nature of Sound Objectives After this lesson, students will be able to O.2.1.1 Define sound and explain what causes sound and how it travels. O.2.1.2 Describe how sound waves interact. O.2.1.3 Identify factors that affect the speed of sound. Target Reading Skill Identifying Main Ideas Explain that identifying main ideas and details helps

*CHAPTER 21 The Nature of Sound SECTION 1 What Is Sound?*  
nature of sound, which are set out in the two chapters of this dissertation. In the first chapter it becomes apparent, after some careful thought, what the nature of sound really is, and how it is propagated from one place to another. Moreover, in the following chapter, three sources of sound are to be considered. § 2.
