multiphase flow in fractured-porous media where, unlike single-phase flow, high-permeability fractures may not be the main conduit to flow of different phases [Firoozabadi and Ishimoto, 1994]. Multiphase flow in subsurface fractured-hydrocarbon formations is of high interest in hydrocarbon production.

Summary The computation of boiling phenomena raises several difficult issues, one of them being the necessity of accounting for both incompressible and compressible phases in the same computational domain. We have developed two different numerical
