AP Physics 1 One-Dimensional Kinematics 2 DESCRIBING MOTION • An important concept is that all motion is relative. When we say that something has a given velocity, that velocity is relative to something else (these are called reference frames). A car traveling to the east at 55 mph is doing so relative to Earth.

AP Physics - One Dimensional Kinematics Velocity and speed are two closely related words. You might think that they are the same thing, but in physics we find that they are very different. Speed is a measure of how fast something moves. It is a rate. Rates are quantities divided by time. In addition, speed is a scalar quantity.
