When we started teaching the course Probability and Stochastic Processes to Rutgers undergraduates in 1991, we never dreamed we would write a textbook on the subject. Our bookshelves contain more than a dozen probability texts, many of them directed at electrical engineering students. We respect most of them. However, we have yet to

The authors present the principles of probability and stochastic processes as a logical sequence of building blocks that are clearly identified as an axiom, definition, or theorem. For each new principle, examples illustrate the application of the mathematics to engineering problems.

Problem 1.3.3 Solution. A reasonable probability model that is consistent with the notion of a shuffled deck is that each card in the deck is equally likely to be the first card. Let  $H_i$  denote the event that the first card drawn is the  $i$ th heart where the first heart is the ace, the second heart is the deuce and so on.
