While modern books are born digital, books old enough to be in the public domain may never have seen a computer. Google has been scanning books from public libraries and other sources for several years. That means you've got access to an entire library of classic literature that you can read on the computer or on a variety of mobile devices and eBook readers.

I was reviewing sample code in Python Cookbook, 2nd Edition (section 9.8). I'm not fluent in Python anymore -- took a break for many years. I was interested in micro threading which this is an example of. When reading the code I'm not able to make head

or tail out of how "Yield None" works.
