*SAP HANA PAL - How to use the Apriori Algorithm | SAP Blogs*  
Association rule learning is a rule-based machine learning method for discovering interesting relations between variables in large databases. It is intended to identify strong rules discovered in databases using some measures of interestingness. Based on the concept of strong rules, Rakesh Agrawal, Tomasz Imieliński and Arun Swami introduced association rules for discovering regularities ...

*Tutorial: SAP BW - association analysis*  
Uses of association rules in data mining. In data mining, association rules are useful for analyzing and predicting customer behavior. They play an important part in customer analytics, market basket analysis, product clustering, catalog design and store layout. Programmers use association rules to build programs capable of machine learning.

*Association rule learning - Wikipedia*  
SAP's Predictive Analysis allows users to leverage many types of algorithms and visualizations.One of the interesting algorithms is Apriori also known as association analysis or basket analysis.. In this video I will demonstrate how to use the Apriori algorithms on data from the Titanic accident.
