### **Lennard Nadalo, M.D. - Radiology Associates of North Texas**

Solve deals primarily with linear and polynomial equations. When expr involves only polynomial equations and inequalities over real or complex domains, then Solve can always in principle solve directly for all the . When expr involves transcendental conditions or integer domains, Solve will often introduce additional parameters in its results.

For the most part, we will only learn how to solve second order linear equation with constant coefficients (that is, when  $p(t)$  and  $q(t)$  are constants). Since a homogeneous equation is easier to solve compares to its nonhomogeneous counterpart, we start with second order linear homogeneous equations that contain constant coefficients only:
