Automatic Voltage
Regulator

The automatic voltage regulator is used to regulate the voltage. It takes the fluctuate voltage and changes them into a constant voltage. The fluctuation in the voltage mainly occurs due to the variation in load on the supply system. The variation in voltage damages the equipment of the

The amplidyne is a high response cross-field dc generator, which has a very high amplification factor and requires very small control power. It is supplied from an automatic voltage regulator (AVR). The main shortcomings of dc excitation system are large time constant (around 3 seconds) and commutation difficulties.
