1. the study of biological inheritance patterns and variation in organisms.
2. Gregor Mendel.
3. Mendel recognized that traits are inherited as either dominant or recessive.
4. Principle of Segregation: The two members of a gene pair (alleles) segregate (separate) from each other in the formation of gametes.

Mendel chose pea plants for his experiments because they reproduce quickly, and he could easily control how they mate. The sex organs of a plant are in its flowers,

Download Free Study Guide Section 3 Mendel and Heredity

and pea flowers contain both male and female reproductive organs. In nature, the pea flower typically self-pollinates; that is, the plant mates with itself.
