systems analysis. In the first case, emphasis is on the process of bringing systems into being, beginning with the identification of a need and extending through requirements determination, functional analysis and allocation, design synthesis and evaluation, validation, operation and support, and disposal.

inter-disciplinary  
problems involving  
multiple,  
heterogeneous,  
distributed systems. •  
System elements  
operate independently.  
• System elements  
have different life  
cycles. • The initial  
requirements are likely  
to be ambiguous. •  
Complexity is a major  
issue. • Management  
can overshadow  
engineering.
