The Institute for Learning & Brain
Sciences (I-LABS) is an interdisciplinary
center dedicated to discovering the
fundamental principles of human
learning, with a special emphasis on
early learning and brain development. I-
LABS seeks to explore essential
questions about human learning.

Vagal primary afferents provide pervasive sensory innervation of the GI tract, with an estimated 60,000 fibers in humans and 20,000 fibers in mice comprising the only set of fibers that directly connect the GI mucosa to the brain .Numerous studies have demonstrated activation of GI tract vagal afferents by gut hormones, cytokines, microbial signals, and ...

Can Science Explain Deja Vu? Most of us have experienced deja vu—that sensation when new events feel eerily familiar. Could this "glitch in the Matrix" be a brain short-circuit?

In the 1950s and 1960s, Roger Sperry performed experiments on cats, monkeys, and humans to study functional differences between the two hemispheres of the brain in the United States. To do so he studied the corpus callosum, which is a large bundle of neurons that connects the two hemispheres of the brain. Sperry severed the corpus callosum in cats and monkeys to study the function of each side ...

The brains of people with excellent
general knowledge are particularly
efficiently wired, finds a new study by
neuroscientists using a special form of
MRI, which found that people with a very
efficient fibre network had more general
knowledge than those with less efficient
structural networking.
