Berry,...To the Power of Three fails to recapture the magic of Keith Emerson and Carl Palmer's past collaborations -- on uninspired tracks like "Lover to Lover," "On My Way Home" and a revised cover of the Byrds' "Eight Miles High," they're simply going through the motions.

To the Power of Three is a very solid effort, and is the kind of 80's pop-oriented rock album on par with what Asia and GTR were releasing at the time. It should surprise no one that this is a strong album musically.

Within the parentheses there are three factors: 2, x^3 , and y^4 .

According to Rule 2 we must take the fifth power of each one. But to take a power of a power, we multiply the exponents. Therefore, $(2x^3y^4)^5 = 2^5x^{15}y^{20}$. Problem 7. Apply the rules of exponents.

Calculate a negative exponent using inversion. When the exponent is a negative number, you are using the inverse of the number. For example, three to the power of negative four, or 3^{-4} , will be equal to one over three to the power of positive four ($1/3^4$) or $1/3 \times 3 \times 3 \times 3$ or $1/81$.
