WorkSafeBC

In Brazil, forests are cleared to make space for agriculture. In Indonesia it is for the palm oil and paper industry. And in the Democratic Republic of Congo, the main reason is extensive tree felling for fuel and farm land around rapidly growing cities. But we do not have to go deep into the lush rainforest to witness sad effects of deforestation.

A brand new tree has much less ecological value than a mature tree that's hundreds of years old so planting a thousand saplings may be no replacement for felling just a handful of ancient trees. Logging can be hugely environmentally damaging, whether it involves clearcutting a tropical rainforest or selectively felling mature trees in old ...

Deforestation or forest clearance is the removal of a forest or stand of trees from land that is then converted to non-forest use. Deforestation can involve conversion of forest land to farms, ranches, or urban use. The most concentrated deforestation occurs in tropical rainforests. About 31% of Earth's land surface is covered by forests at present. This represents one-third less than the ...

Deforestation - Wikipedia

The simple and powerful narrative of 'plant a tree to save the planet' is universally appealing, but over-reliance on tree planting as a climate solution raises a number of concerns (Chazdon, 2020; Holl & Brancalion, 2020). First, planting trees does not equate to establishing a healthy forest with a complex functional web of interactions ...

nature-based solutions to ...

Trees of the same species grown in diverse conditions may grow very differently. The increase in girth of a tree grown in the open is twice as much as one grown in woodland. An average free-standing tree would add 2.5 cm per year to its girth, with fast trees (like giant sequoia, coastal redwood, Sitka spruce and Douglas fir) reaching 5-7.5 cm
