Placental abruption is when the placenta separates early from the uterus, in other words separates before childbirth. It occurs most commonly around 25 weeks of pregnancy. Symptoms may include vaginal bleeding, lower abdominal pain, and dangerously low blood pressure. Complications for the mother can include disseminated intravascular coagulopathy and kidney failure.

Abortion is the termination of a pregnancy by removal or expulsion of an embryo or fetus. An abortion that occurs without intervention is known as a miscarriage or "spontaneous abortion" and occurs in approximately 30% to 40% of pregnancies. When deliberate steps are taken to end a pregnancy, it is called an induced abortion, or less frequently "induced miscarriage".

Abortion - Wikipedia

sugar sugar hooda math christmas edition ☐☐vitamins. In patients with CF aged ≥ 10 yrs, an annual OGTT following standard World Health Organization (WHO) 10 recommendations was conducted as a screening test in order to identify CFRD. Criteria for IFG are responding to the former ADA criteria for elevated FPG 7. IFG was diagnosed using a $\sim 10\%$ lower level for whole blood testing compared ...
